Thank you!

CONSERVATION FISHERIES, INC.

Conservation Fisheries, Inc. (CFI) is a non-profit captive propagation fish hatchery, specializing in breeding rare and imperiled species of native, non-game, freshwater fish.

CFI has been local to Knoxville since 1986, spawning from a passion project that began at the University of Tennessee, Knoxville to restore species, once thought extinct, in Abrams Creek in the Great Smoky Mountains.

Over almost 40 years, CFI has grown their mission of preserving and restoring freshwater biodiversity by partnering with multiple conservation organizations and agencies across the southeastern United States. They have successfully propagated over 80 species of non-game fish, releasing over 250,000 fishes into creeks and rivers to support native fish populations.
